

Total synthesis of (-)Morphine

Alexandre Bruneau
1st Year PhD Student
Chimie Thérapeutique D3-1

Morphine is an opium alkaloid extracted from *Papaver somniferum*. It is indicated in moderate to severe pain as in surgery, trauma, acute pulmonary edema, fractures, cancer pain, and severe neuralgia..

- 1/ Find each intermediate (A-O)
- 2/ Explain the formation of E, G and O
